

How **neuro** transforms your Engineering and Quality Management

In today's climate, companies must deliver new digital capabilities to drive growth. To succeed, you need to accelerate the transformation of core engineering and quality capabilities to ensure alignment with business priorities and goals.

As this transformation gains momentum a new blueprint for managing engineering and quality teams is critical for achieving greater speed, agility and business performance.

Business Goals & Transparency

Align engineering and quality teams with company goals to enable leadership teams to make informed decisions transparently

People & Performance

Understand team performance to enable your company to meet its goals and maximise productivity, value and performance

Consistent Management & Execution

Achieve consistency in management and execution to optimise efficiency, reduce waste and enable accurate forecasting

Borderless Management

No borders between teams, complete transparency on performance, decisions, and outcomes

Continuous Automation

Intelligently identify and automate repetitive management tasks and decisions

AI-Driven Decisions

Recommend courses of action and decision options

Applied Analytics

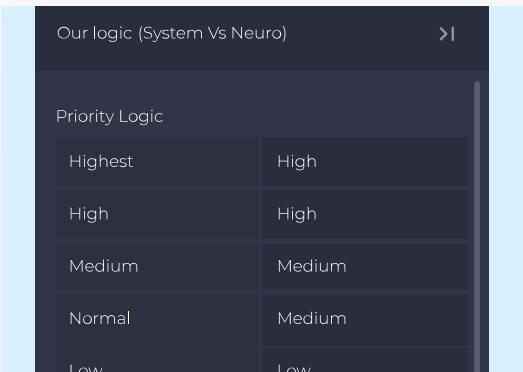

Provide actionable insights from analysing data within context

Seamless management data

Maintain a common and consistent management-data model

You can close the gap between **Insight** and **Action**

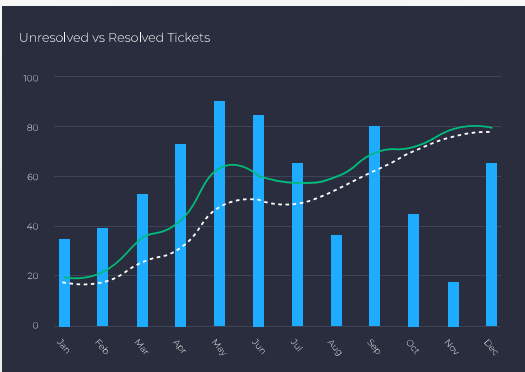

neuro gives you complete visibility of your engineering and quality performance in seconds

Data normalisation

neuro integrates directly with Jira, Zephyr and Jenkins out-of-the-box, quickly and simply in hours

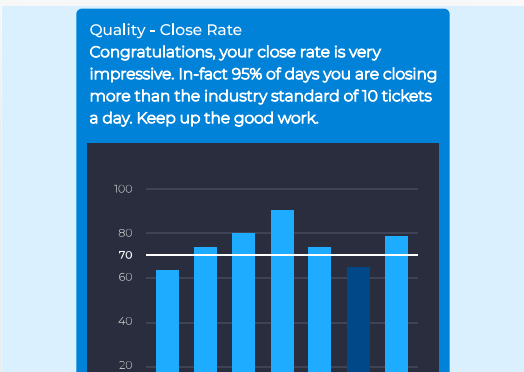

neuro provides a single source of truth by aggregating and normalising complex datasets from disparate sources into a common language

Visualisation

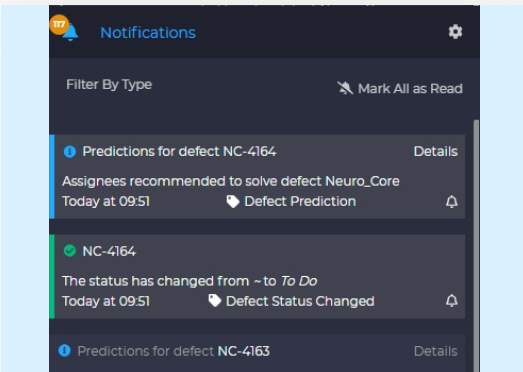

neuro generates smart informative dashboards for multiple roles giving your teams up-to-date and accurate information

neuro visualises a mash of data from multiple sources giving you instant transparency across multiple teams and programmes

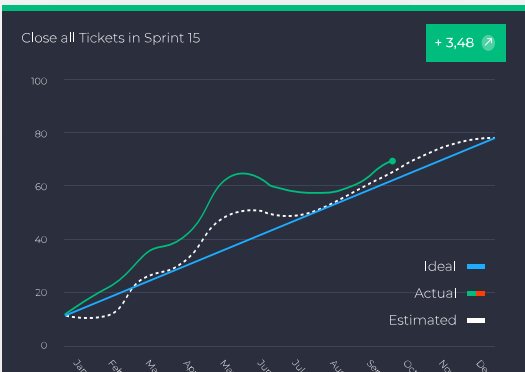

Intelligence

neuro produces actionable insights enabling you to understand the performance of your teams and optimise your engineering and quality functions

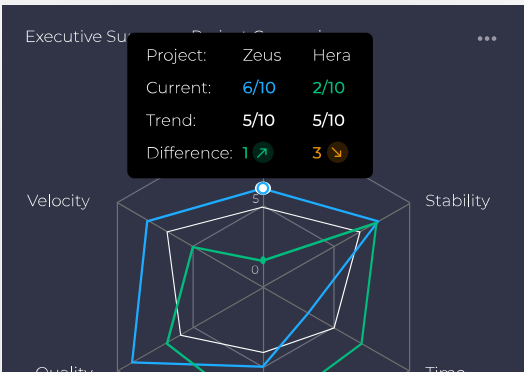

Automation

neuro automates and eradicates traditional and laborious administrative tasks, reporting needs and key engineering functions saving critical project time and speeding up output

Goal setting

neuro enables user-defined goals to track progress, identify roadblocks and align engineering and quality teams with business priorities

Consistency

neuro enables consistency across your portfolio. **neuro** addresses the challenge of managing dependencies among teams especially third parties by unifying KPIs and providing greater visibility
